Translatables

During my time grinding HVAC engineering projects in the AEC industry, I have logged the challenges I have overcome and thus skills I have built that span any industry and any role.

From being thrown into the Blue Origin wolf den right out of college in 2019, to juggling four critical projects as the team lead in 2025 serving Boeing, Lockheed Martin, and CCSFS simultaneously (full-remote and also hybrid), it seems I've carved out an impressive portfolio.

I love life. My greatest weakness is my fascination for many facets of life and work. That has led me to working every weekend and many moonlight hours during the week. Each day alive (and more importantly thriving) on Earth is a true blessing from God. Each day, I instill that in my mind and soul through visceral meditation and prayer. I am far from perfect, but the more light I take in, the more I can shine.

As I reflect on my work life through unique Questercising, this document is a catalyst for any career change that aligns best with my inherent abilities, acquired abilities, and my current ikigai on Earth.

Solar Sales and Chief Operating Office

Warmac Energy

August 2024 – February 2025, FL, NJ, PA, DE

- Built real sales toughness through sustained rejection — a cold-shower discipline that sharpened confidence, loosened performance energy, and strengthened composure across business, creativity, and life. Piel dura.
- Developed into a highly competent salesman: storyteller, conversational weaver, and steerer — able to guide dialogue toward trust, clarity, and decisive action.
- Gained deep exposure to the solar energy industry and its end-to-end flows, building transferable intuition for industries with complex permitting, financing, logistics, and customer-education cycles.
- Operated as a local market leader in Florida, balancing sales generation with operational execution.
- Ran a business with a partner — learning firsthand how leadership, trust, incentives, and pressure evolve under both scarcity and growth.
- Enhanced internal operations through hands-on system building: onboarding processes, training frameworks, templates, and repeatable workflows.
- Trained and onboarded team members with a focus on clarity, accountability, and ownership.
- Practiced radical accountability — commitments made were commitments delivered.
- Worked two jobs simultaneously, absorbing overtime, sacrifice, and sustained discomfort to keep operations moving.
- Led with emotional intelligence — conveying direction, sentiment, and hard truths with intention rather than noise.

Stage Performer

Deansy music, comedy, motivation, poetry, spoken word

May 2022 – Death; FL, NY, NJ, PA, DE

- Weekly stage performances eliminate social anxiety and build calm, controlled presence under pressure.
- Developed the ability to speak clearly, directly, and without fear in front of rooms, cameras, and critical audiences.
- Built instinct for timing, pacing, and emotional calibration — knowing when to push, pause, or pivot in live environments.
- Became physically looser and more expressive on stage, translating confidence into movement, delivery, and command.
- Comfortable being seen, evaluated, and judged — and continuing forward without shrinking.
- Experience performing in unpredictable, high-energy settings where adaptability matters more than perfection.

Human X-factors

Dean Hanson_v108

Daily – Death; Earth & beyond

- Proven ability to operate in discomfort by choice — using friction as training rather than avoiding it. This builds resilience through daily exposure to fear, rejection, uncertainty, and pressure. I maintain a daily resistance practice combining deep meditation, intense physical training, prayer, and deliberate heat/cold exposure to build clarity, emotional regulation, and stress tolerance. Grounded by daily practices of reflection, prayer, meditation, and alignment — maintaining clarity in both solitude and chaos.
- *Operates in discomfort by choice, using friction as training rather than avoidance; builds resilience through daily exposure to fear, uncertainty, and pressure via a disciplined resistance practice—deep meditation, physical training, prayer, and deliberate heat/cold exposure—maintaining emotional regulation and clarity in both solitude and chaos.*
 - *daily prayers: I surrender my flesh and relinquish my ego to be who I must be perpetually growing toward my purpose on this planet before I perish however and whenever God wants me. Daily distilling of ego through prayer, meditation cold showers, and my other trusses mentioned.*
 - *Weekly meditations: teleportation meditation, continuity flying, 3rd eye exercises,*
 - *Daily injection of gratitude through narratives, presence,*
- Disciplined addiction and mental cleanses through unique phone fasting (writing a pocketbook about this!), 48 minute sauna sessions emulating Yucatan Temazcal ceremonies
- I practice Spanish daily as a cognitive training tool and to build long-term cross-cultural fluency.
- Able to bring people together across backgrounds and temperaments, injecting clarity, humor, and grounded energy. I am a unique leader and communicator, injecting jokes, motivation and wisdom into daily work leading to healthy work relationships. Experienced navigating feedback from people whose opinions carry emotional weight, without losing self-trust. Known for elevating morale, steadiness, and focus within groups simply by how I show up.
 - *Brings people together across backgrounds and temperaments through grounded presence, humor, and clear communication; navigates high-stakes feedback without losing self-trust, elevates morale and focus within groups, and leads daily work relationships with intention, steadiness, and wisdom.*
 - *Moves through rooms with grounded energy, humor, and clarity; brings people together across temperaments, absorbs heavy feedback without shrinking, and lifts morale and focus not by force or volume, but by how I show up and hold the moment.*
 - *inside jokes, spanish phrases and cultural learning and sharing,*
- As an artist that aspires to grow my supporters and share my creations for the benevolence of the people, this has led to wearing unique hats (buckets and baseball caps mostly). I lead a team consisting of audio engineer and producer partners, a video editor in Lima, Peru for almost two years compounding our chemistry, and as of late 2025 have been working with a scheduler and analytics gentlemen I met at a concert in Philadelphia. Throughout the years since February 2022, I have persevered through immense heartbreak seeing my dreams shine and crumble over 100 times. There is something deep in me, planted in my youth playing ice hockey and football, to never give up. To choose to fight and persevere.

Black sheep AEC Industry_HVAC engineer

BRPH

December 2023 - Present; Florida & beyond

- Survived repeated cycles of “project hell” across six years — SpaceX X2 clean rooms, cascading ISO-class environments, process exhaust systems, and schedules that changed faster than drawings could humanely be issued.
- Learned to lead projects independently on SPACE and aerospace work, owning outcomes amid constant scope shifts, contradictions, and pressure.
- Learned to “eat an elephant” on a Patrick Space Force Base project including large-scale systems: 13 AHUs/MAUs, a cooling tower, CHW with WCC, multiple variable primary pumping systems, refrigerant monitoring, and full hydronic and airflow control architectures — sequencing one system at a time until the whole worked.

- Authored extensive specifications and control documents by teaching myself through manufacturer reps, manuals, and deep technical study when no playbook existed.
- Conducted site walks, client meetings, and proposal efforts — including LCCAs and early studies — to secure future work and influence project direction upstream.
- Navigated dysfunctional dynamics directly: absentee project managers, contradictory SOWs vs DRFI responses, and clients who changed direction midstream — without losing delivery momentum.
- Developed a strong radar for proactivity: asking the questions that prevent downstream pain (future tenant upsizing, fuel selection, partial demo vs reuse, sequencing for future flexibility).
- Reads, filters, and synthesizes massive SOWs, RFPs, specs, and contract documents — extracting what's accurate, relevant, and actionable while discarding noise.
- Writes design narratives, bid books, proposals, and revised specifications with brevity and intent.
- Built internal SOPs and automation systems: selection email templates, GPT-friendly Excel tools, and workflows where combined PDFs feed schedules directly into deliverables.
- Used GPT intentionally for learning and acceleration: cooling tower bypass logic, UFGS specs, sequence comprehension — not as a crutch, but as a force multiplier.
- Rebuilt and standardized legacy controls libraries into organized internal systems with consistent logic, diagrams, and sequences of operation.
- Developed internal case studies and advanced load modeling tools (including Trace 3D templates) to inform leadership and reduce design risk.
- Led projects with senior QC support for SpaceX, CCSFS, Patrick SFB, Boeing, and Lockheed Martin.
- Ran bid walks and technical proposals at the Cape; arrived prepared, read the room quickly, asked for ladders when needed, and went deeper than expected.
- Experienced the full design arc: RFPs → client relations → design development → final 20% → limited construction services.
- Six years of logging and lessons learned sharpened exceptional sequencing instincts — knowing **what to focus on, when**, and which project truly matters.
- Protects focus aggressively: works in sprints, closes communication loops fast, minimizes attention residue, and leverages momentum in deep, sedentary work.
- Leads client meetings and internal teams with a balance of firmness and tact — the “ginger dance” of client management.
- Thinks in 3D while reading 2D — visualizing buildings, systems, and constraints inside BIM and selection software.
- Comfortable diving into unfamiliar equipment specs, codes, and systems — learning fast and understanding downstream design impacts.
- Works across SMEs, manufacturer reps, architects, engineers, specs teams, contractors, and third-party design firms.
- Navigates a wide spectrum of personalities — including egos, volatility, and miserable behavior — while still delivering clean outcomes.

- Resolves hard surprises without stopping parallel deadlines.
- Example: resolved a late-stage refrigerant change (R-410A → R-454B) on an aging project by diving into ASHRAE 15, IMC, consulting peers, running calcs, coordinating with Trane, and closing a high-risk field RFI decisively.
- Skilled at making complicated topics simple for non-technical decision-makers — enabling confident, high-cost choices.
- Capable of sound decisions across varying levels of certainty; knows when to double down, delegate, or deliberately strengthen a weakness.
- Operates fluently across Revit, equipment selection software, Trace, and complex Excel tools — often reconstructing buildings from documents, photos, and satellite imagery alone.
- Has led and collaborated with top-tier clients including Northrop Grumman, L3Harris, Blue Origin, Lockheed Martin, Boeing, DoD, JetBlue, and VCSD.
- Experienced working as the youngest person in high-stakes rooms — often without assistants or backup — carrying disproportionate responsibility.
- Deeply versed in equipment manuals and sequences of operation across chilled water and DX AHUs, air- and water-cooled chillers, paint booth exhaust, and complex multi-path exhaust systems.
- Maintains strategic clarity in chaos — distinguishing IFP vs 90% vs IFC sets, prioritizing correctly, and steering teams without panic.
- Built the muscle of anticipating change, accepting iteration (11+ revisions on Pod 6; constant iteration on SpaceX), and logging scope drift instead of resisting it.
- Moves forward without full information while clearly communicating schedule, cost, and lead-time consequences.

Principles and Interests

- Prioritizes consistent relationship maintenance, regularly calling family and close friends to keep trust, perspective, and grounding intact. Through this, I have maintained relationships for over 10 years despite leaving home in July 2019.
- Follows a disciplined, long-term investing philosophy (similar to Bogleheads) focused on low-cost indexing, risk management, and compounding over speculation.
- I study and invest in Web3 systems with a focus on incentives, governance, and decentralized infrastructure rather than hype cycles.
- I actively study modern homesteading, permaculture, and sustainable system design as extensions of systems thinking applied beyond the screen.

SOFTWARE COMPETENCY

- Software developer tools: VS Code, GPT with html, CSS, Javascript implementation (learning with AI not blind vibe coding), leveraging GPT wisely for research, markdowns, coding
- Building design tools: Autodesk Revit, Bluebeam Revu, Trane Trace 700 and 3D
- FL Studio for tracking, mixing, project collaboration, light production, light mastering
- Capcut desktop video editing for simple yet effective creative videos
